

Reference Manager Extension

Features and Benefits

The Reference Manager Extension is a stand-alone tool that helps CAD managers and users manage complex file relationships and dependencies generated by AutoCAD® 2002 and the vertical products based on it. A CAD manager can generate a network-wide report detailing all the AutoCAD-based file references. Any reference path changes necessitated by moving a project or renaming a file server, for instance, can easily be performed on multiple files in a single operation.

Feature	Function	Benefit
List References	Displays a list of the external references for a specified set of files.	Provides the ability to generate a network-wide report showing all the AutoCAD file dependencies.
Export Report	Saves the reference list in XML, CSV or XLS formats.	Allows the report to easily be imported into other applications, such as Microsoft® Excel.
Edit References	Edits the path of selected references.	Allows a user or CAD manager to easily update multiple reference path changes.
Create Log File	Records all the reference edits.	Provides the ability to retain historical records of all reference changes.
